**RE: BENNETT, MICHAEL 46893564**  
**DOB: 12/19/1991**

To Whom It May Concern:

Michael Bennett is now 15 weeks postop left knee ACL patellar tendon graft reconstruction performed on 01/06/2015 at St. Mary's Hospital by Dr. Robert Hancock.

Michael's knee looks great at this point. He has full range of motion and no swelling. He has remarkable quadriceps tone as well as girth. He is pain-free and has a normal ligamentous exam in regards to anterior translation. He has a normal Lachman's, normal anterior drawer, and negative pivot shift.

Michael has been performing his pre- as well as postop rehabilitation under the care of Ron Courson, ATC, PT. During the course of his rehabilitation, he is progressing nicely and has no setbacks to this point.

I am extremely happy with Michael's progress to this point. As you can see evidenced by the attached video Ron Courson has sent, he is running extremely well and progressing from a functional standpoint. If you have any further questions in regards to this matter, please do not hesitate to contact me at 706-549-1663.

Sincerely,

Kelly Ward, PA-C, ATC / Robert E. Hancock, M.D.
